SUBMISSION TO THE ROYAL SOCIETY OF BIOLOGY'S 'VOICE OF THE FUTURE' 2025 EVENT

1. The government aims to optimise the use of antimicrobials by raising awareness of appropriate antibiotic usage across human health, animal health and agriculture. How can the government ensure that all sectors understand the severity of the threat of antimicrobial resistance to ensure cooperation?
2. Antibiotics underpin all modern medicine, but resistance is a constant threat. The current economic market for new antibiotic development is struggling, and companies do not find antibiotic research to be attractive or profitable. How can the government ensure that research is undertaken to develop novel antibiotics?
